

2012 Price List

www.agriforestbiotech.com

2012 PRICE LIST

Welcome to our 2012 Price List. We would like to take this opportunity to pledge our commitment to being your supplier of high quality tissue culture plants. We would also like to invite you to review our 2012 Price List (listed in Canadian dollars) and place an order with us this year. Our 2012 Product Catalogue, complete with images and variety descriptions, is available for you to download from our website, www.agriforestbiotech.com. If you are new to AgriForest, you are welcome to call us for a free sample. We are confident that you will be pleased with the quality of our tissue culture plants.

Product Information and Minimum Orders

Even though we have listed all the varieties we have in culture, some varieties require advance notice to produce in the size or quantity that you may need. Although we have most varieties available all year round, to ensure that you receive your complete order on time, please place your order at least 6 months prior to your preferred shipment date. Depending on your need, ease and economy of shipments, we can supply our plants in following different sizes:

- **Tissue Culture Plantlets:** For our overseas and select North American customers we can supply tissue culture derived plantlets from our laboratory in sterile conditions to meet the plant quarantine requirements of your country. The minimum order for the Tissue Culture Plantlets is 1000 per variety. For those customers who are not familiar with the handling of these plantlets, we will provide specific instructions to handle these plantlets. Tissue Culture Plantlets are produced on a custom order basis only and we recommend that you discuss your needs well in advance to serve you better.
- **Acclimatized 72 Plugs:** For the price conscious customers we can supply select varieties of plants in form of acclimatized plugs (72 Plugs/Tray) from our greenhouses. Plants grown in these plugs are about 2-3" in size. The minimum order for this size plug is 144 plants or 2 trays per variety, with the entire order totalling at least \$500. Since this size plug is not our routine product, we recommend that you place your order at least 6 months in advance to help schedule our production accordingly so that we can ship your order on time when you need it! These plugs are shipped only during growing season and may not be available as dormant plants.
- **Liners:** This is the size of our products which provides the best value for your money! This size is usually available all year-round and in most cases we can ship them within days notice! More-over it is easy to handle at your end without the need of greenhouse facility and can be transplanted straight in the field or into larger containers! We produce tissue culture liners in 2.5"x2.5"x3.25" size pots, 32 pots per tray. Our liners are at minimum 6" but can be up to 24" tall when shipped. To secure the largest possible liners we recommend that you place your order as early as possible as we ship the largest ones to those customers who has placed the order well in advance. The minimum order size for our tissue culture liners is 64 plants or 2trays per variety, with the entire order totalling at least \$500.
- **4" Pots:** We also produce tissue culture plants in 4" pots. These come with individual colour picture labels and are intended for immediate retail sale as promotional items or for potting up into one gallon size containers for quick turn-around. The minimum order size for our tissue culture plants in 4" pots is 18 plants per variety, with the entire order totalling at least \$500. For 4" pots, we require a minimum of 3 months notice prior to your preferred shipment date.
- **Square One Pots:** For our garden center customers and landscape contractors we also now provide some of our tissue culture plants in Square One pots which measure 5.5"x5.5"x6" tall. Since these are not our routine products, we recommend that you place your order at least four months in advance to receive your order on time when you need it. These pots come as retail ready products with large size picture labels with growing instructions. The minimum order per variety for this size container is one tray of 8 containers, with total order of at least \$500.

Custom Propagation

AgriForest also engages in custom propagation projects for your specific needs. If you have a variety that you find difficult to propagate through conventional means or you have a new variety which you would like to bulk up quickly, feel free to contact us to discuss your specific requirements. Minimum order for custom propagation will be at least 2000 plants per variety or selection.

Terms

Payment in full prior to shipment is required for all new customers for the first order that is placed with AgriForest. A credit application will be sent along with the order acknowledgement. This must be filled out, signed, and returned to AgriForest. To those with approved credit and to our established customers, we extend a 30 day credit. Overdue accounts will be charged interest at the rate of 2% per month (24% per annum) or the maximum allowable legal rate. The purchaser assumes ownership and responsibility of goods at the time of shipment. However, AgriForest retains a vendor's interest in all goods until they have been paid for in full.

Guarantee and Claims

AgriForest takes great care to ensure that all nursery stock is in good condition upon leaving our nursery. Claims for any cause must be made in writing within 10 days of receipt of goods. AgriForest will not consider any claim after stock has been processed, improperly stored, planted, or otherwise treated, modified or used in any way. Claims for losses while goods are in transit must be filed directly with the carrier. A credit note, which can be used for your next purchase with AgriForest, will be issued for legitimate claims.

Shipping Information

AgriForest ships its products via two methods:

- **Small Orders:** In this case, plants are packaged in our custom designed shipping boxes and sent via courier (Greyhound or UPS).
- **Large Orders:** In this case, our plants are placed on a custom built pallet with wooden racks, or boxes which are shrink-wrapped. We use common carriers, with protective services where available. These pallets can be reused in your nursery or garden centre.

All nursery stock is shipped at the purchaser's risk and expense, F.O.B. Kelowna, BC. We charge for packaging material at our cost.

Orders may also be picked up at our premises in Kelowna, BC. Call your order in advance and it will be assembled and ready to load. Our hours of operation are 8am to 4pm.

Thank you for choosing AgriForest Bio-Technologies! We value your business and welcome any comments or suggestions that you may have, so that we can serve your individual needs better.

About AgriForest Bio-Technologies Ltd.

AgriForest Bio-Technologies Ltd. is a plant biotechnology company, located in Kelowna, BC, that produces economically important and unique plant varieties through tissue culture technology for the horticulture, agriculture, and forestry industries.

AgriForest was originally established in 1984 with a mission to provide tissue culture dwarf fruit tree rootstocks to local orchardists. Since then, we have expanded to produce high quality tissue culture liners of Shade trees, Ornamental shrubs, Roses, Clematis, Lilacs, Saskatoon and Honey berries, Hostas, Heucheras and other Perennials as well as Small Fruit Trees Plants suitable for colder climates. The list does not stop there! Our Research and Development department is constantly working on adding new plant varieties and developing environmentally friendly tissue culture and greenhouse production technology. Producing over a million plants, AgriForest is now one of the largest suppliers of tissue culture plants in North America.

AgriForest also undertakes custom propagation projects for growers who want to commercialise a new variety, or have plants they find difficult to propagate conventionally, as tissue culture is often quite successful in propagating these varieties.

SHADE TREES

AgriForest is pleased to offer a wide variety of tissue culture Shade Trees. Our tissue culture Shade Trees exhibit a more condensed, upright branching habit, an equal root to shoot ratio, and a higher survival rate after field planting compared to conventionally grown ones. Also, because our plants are not budded or grafted, there are no problems with suckering.

TISSUE CULTURE HEUCHERAS (Coral Bells)

AgriForest is pleased to offer an excellent selection of tissue culture Heucheras. Our Heucheras produce more shoots over a shorter period of time, resulting in a bushier plant. They have been selected for their sharper and brighter colors, disease resistance and drought tolerance. They are available as 72 Plugs/Tray, 4" Pot (18 Pots/Tray), Square One Pots (5.5" x6", 8 Pots/Tray).

Species	Variety	Prices / Unit*		
		72 Plugs	4" pot	Sq. One Pot

A close-up photograph of several overlapping green corn leaves, showing the distinct parallel veins and the texture of the leaf surfaces. The leaves are in various shades of green, from a vibrant lime green to a deeper forest green, and are arranged in a way that creates a sense of depth and movement.
